

# The Roswell Case Study

- The 1947 Roswell incident investigated claims of a crashed unidentified flying object (UFO) near Roswell, New Mexico
- The "Roswell Report" refers to a collection of government records compiled by the U.S. Air Force regarding this incident
- The report ultimately concluded that the debris recovered from the crash was from a high-altitude weather balloon used in a secret military project called "Project Mogul" and not an alien spacecraft, as had been popularized in UFO lore.
- Project Mogul was a Top Secret project by the US Army Air Forces involving microphones on high-altitude balloons to detect sound waves generated by Soviet atomic bomb tests
- The Air Force released the Roswell Report in 1994 following a request from the General Accounting Office (GAO) to investigate the claims surrounding the Roswell incident.
- While the official report concludes that the incident was not related to extraterrestrials, many UFO enthusiasts continue to believe the government is covering up evidence of an alien crash.

# The Roswell Report

- In July 1994, the Office of the Secretary of the Air Force concluded an exhaustive search for records in response to a General Accounting Office (GAO) inquiry of the Roswell Incident.
- The focus of the GAO probe, initiated at the request of Congress, was to determine if the U.S. Government possessed information on the alleged crash and recovery of an extraterrestrial vehicle and its alien occupants near Roswell, N.M. in July 1947.
- The 1994 Air Force report was published in one volume for ease of access for the general public.

# Your Mission:

- For our use case, you will be serving as an analyst/investigator in 1994 tasked to report on this case.
- Your analysis will be based on actual witness statements associated with the Roswell Report.
- You will develop a RAG-based AI system that can assist you in summarizing and analyzing these statements

# Witness Statements Highlights

- Spilhaus confirmed that he was involved in the development of long-range balloons for the detection and collection of debris from atomic explosions.
- Coltman witnessed a balloon crash north of Roswell in May, 1959. Crew members sustained minor injuries and were treated at the Walker AFB hospital. No UFOs or space aliens were present.
- Gildenberg was a meteorologist and aerospace engineer, and an expert on high altitude balloon trajectory forecasting and acoustical detection of nuclear explosions. He confirmed that dummies landed in the Roswell area which could be mistaken as aliens. He is certain that Project Mogul was responsible for at least some portions of the Roswell incident.
- Trakowski claimed that there was no planned cover story for Project Mogul, even though he said Carl Pflcok wanted to establish Roswell as a UFO incident.
